

West Fraser

our sustainability commitment

Overview

As an integrated forest products company producing lumber, laminated veneer lumber, medium density fibreboard, plywood, pulp, linerboard, kraft and other grades of paper, we recognize our role in being a responsible steward of the forest.

With over 9,000 employees in Canada and the U.S., West Fraser is one of the largest forest products companies in North America.

Our Sustainability Commitment

We understand that operations of our size and scope come with environmental responsibilities. At West Fraser, we are proud of our environmental achievements, and of our responses to new challenges and opportunities.

We maintain a philosophy of continual improvement of our forest practices and manufacturing processes to optimize the use of resources and minimize the impact of our operations on the environment.

West Fraser recognizes that environmental excellence is an integral aspect of long-term business success. Our Company and its employees are committed to the following:

- Surpassing the requirements of all applicable environmental laws and regulations, and other requirements to which the organization subscribes.
- Preventing pollution and continuing to improve our environmental performance by setting and reviewing environmental objectives and targets.

- Working to protect wildlife habitat and species by implementing sustainable forest management practices.
- Conducting periodic environmental audits and committing to independent, third-party forest certification of all our operations.
- Providing training for employees and contractors to ensure environmentally responsible work practices.
- Communicating our environmental performance and objectives to employees, customers, shareholders, governments, local communities and other stakeholders.
- Reviewing our environmental policy on a regular basis to ensure that it reflects the Company's continuing commitment to environmental stewardship.

We've Planted more than 1.1 Billion Trees

Our company is proud to say that over the past 50 years, we've planted more than 1.1 billion trees, constantly renewing the forests in which we operate.

As these replanted forests grow, they remove substantial amounts of greenhouse gas from the atmosphere, contributing significantly to global warming reduction measures.
