

Electrical Safety

Fast Facts.

MCC doors that are left open decrease the safety design of the can/MCC in the event of an arc flash. Notify the shift electrician immediately.

Special Note:

Only electricians are authorized to open a MCC door, disconnect, PLC / VFD cabinet, or similar electrical apparatus.

In the event where a MCC is also within the same room as a PDC, personnel must be escorted by an authorized electrician to lockout specified equipment.

For example: Dust Collection MCC in PDC #2
