

# Overhead Hazards

According to OSHA, being struck by an object on the job is one of the leading causes of injuries and deaths in the construction industry.

Struck-by hazards are one of the four most deadly hazards in the construction industry and account for around 10% of all industry fatalities annually.

Struck by injuries may result from falling, swinging or rolling objects where the injury is created by impact

**Be mindful of hazards  
and stay alert to your  
surroundings!**
