

Overhead Crane Safety

5 STEPS TO REMEMBER

- 1) **Always complete the Pre-Use Inspection form in the Crane Log Book and review earlier entries for any previous concerns**
- 2) **Do a pre-lift site survey, to identify areas where traffic may enter the lift zone, then plan for controls if any areas of concern are found**
- 3) **Identify the one person responsible for hand signals and confirm what signals are to be used**
- 4) **Determine the weight of the object to be lifted, as well as, the balance point of the load**
- 5) **Inspect all slings and hardware to be used for condition and capacity**
