West Fraser Safety Policy #23 (Wood Dust Mitigation & Control)

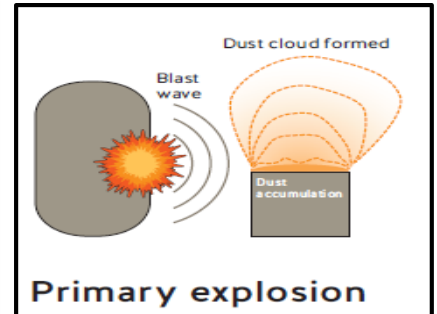

#23

Everyone remembers the fire triangle and the 3 elements (Oxygen, Heat & Fuel) that are needed to create a fire. Do you know the 2 additional elements that are needed for a dust explosion?

(Dispersion & Confinement)

- Examples of **Confinement** can be in the form of a bin, tank, room or building
- Examples of creation of **Dispersion** can be created by direct flow from compressed air, a sudden release of dust or from a primary explosion.
