

# Guardrails

*Guardrails are the first line of defense in fall prevention.*

Guardrails must have:

*a top rail*

*a mid-rail*

*toe boards*

If you bump a rail with material or equipment, check to make sure it hasn't been weakened. If you discover a broken rail, post or toeboard, repair or report it immediately.

***Do NOT stand or walk on guardrails!***

*"Safety is a core value and business priority"*
