

Ventilation

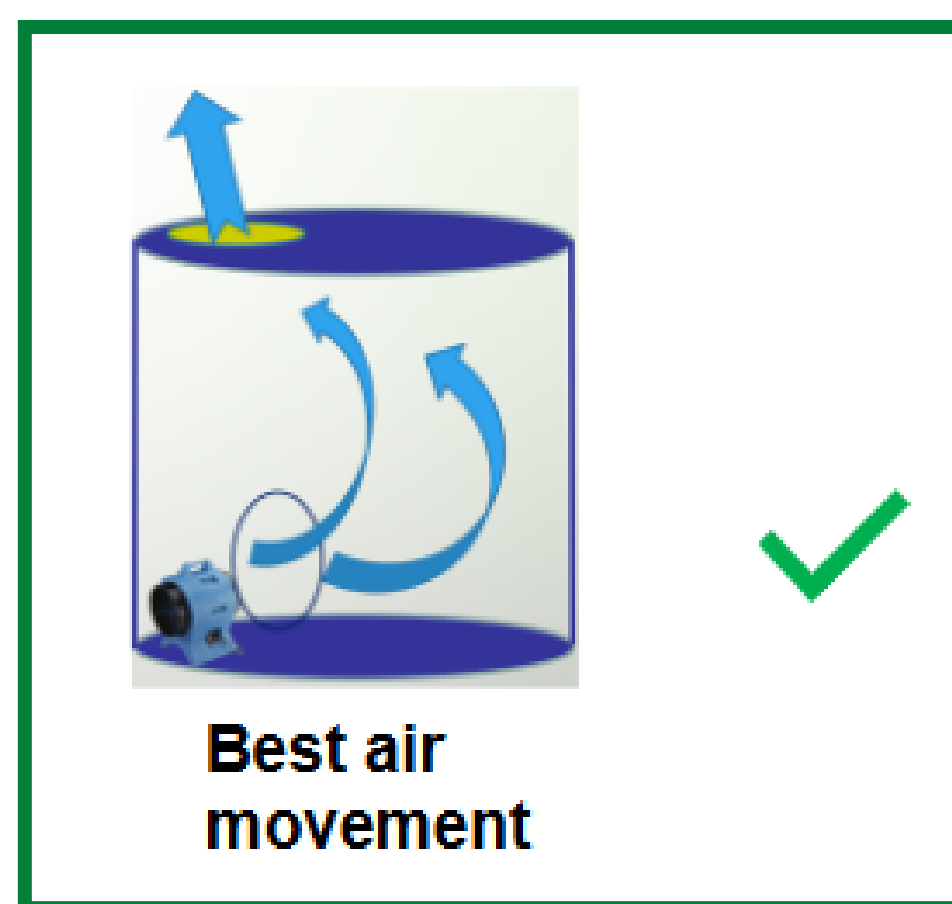

The goal of ventilation is to maintain clean, respirable, air (which is equivalent to outdoor fresh air).

If the ventilation system of a confined space fails, entrants must leave the confined space immediately.

Forced air fan with a clean air supply into CSE bottom with roof opening(s) - effective all conditions

Air venturi draws air from CSE - effective for localized generated air contaminants & all conditions

Local Exhaust Ventilation (LEV) effective for localized generated air contaminants (i.e. welding, grinding, etc.)
