OPERATIONS

A leading diversified wood products company, West Fraser has more than 45 locations in Western Canada and the southern United States. An established leader in sustainable forestry, high-efficiency wood product production and innovation in manufacturing. West Fraser’s primary wood products are lumber (spruce, pine and fir — “SPF”) and southern yellow pine (“SYP”). The company also produces panels (plywood, MDF), engineered wood products (LVL), pulp & paper (NBSK and BCTMP), wood chips, other residuals (bioproducts) and energy. Our operations in western Canada manufacture all of the company’s products, except southern yellow pine lumber, while our mills in the southern United States produce SYP lumber and wood chips. www.westfraser.com
