# OPERATIONS

West Fraser is a North American wood products company. Our main product is lumber (spruce/pine/fir (“SPF”) and southern yellow pine (“SYP”)). We also produce panels (plywood, MDF and LVL), pulp (NBSK and BCTMP), newsprint, specialty products, wood chips and energy. The operations located in western Canada manufacture all of the products described above except SYP lumber. The sawmills located in the southern United States produce SYP lumber, specialty products and wood chips.
